Celestica. Electronics HW Design Engineer Jr.

EMPRESA

Multinacional desarrollo de componentes electrónicos

FUNCIONES

Celestica is a Canadian company, world leader in the electronic manufacturing sector. The plant in Valencia focuses its activities in the Aerospace, Industrial and Healthcare areas, producing and assembling high complexity products. The main differentiator in Valencia facilities are its design capabilities and the various engineering services that it can provide to its customers, creating a differential value beyond the regular electronic manufacturing services. Area/Department: Design and Engineering Services (D&ES). The Design and Engineering Services department in Celestica Valencia is specialized in the development of new products and electronic systems for both its customers (mostly international) and the production line within the factory. The D&ES team is composed by more than 20 specialist engineers: electronics, software, mechanics; that, in the end, build a multiskilled team able to carry on (almost) any kind of development projects. The areas in which these projects are developed are mainly related with healthcare and in-vitro diagnosis, industrial, aerospace and test development. Job Description: As an essential part of a development team, the designer will take responsibility with minimum supervision for different tasks in the hardware conception, build and debug of new products and/or systems. From architecture to component/equipment selection and system verification. Tasks to be performed will be related to electronic circuits design and analysis: electrical diagrams, component selection, PCB Layout, simulations, measurement and trials, evaluation of different design options, reference designs, and strategies etc. She/He will participate as one of the components of the development team, contributing with her/his point of view and proposing solutions and alternatives aimed to overcome the different challenge that a development project present.
